

Project Background and Purpose

NTG Clarity Networks has undertaken several projects that were international in scope for a major oil and gas producing company in Canada with head offices in Calgary and a number of international operations. NTG was able to provide a project manager to manage Information Technology Services at a site in Malaysia for a period of six months and at a site in Sudan for a period of over one year.

Main Activities and Environment:

The main activities of the project manager centered on the setup of the information technology site environment, hiring and training of staff and preparation of reports and documentation to turn the facility over to internal staff. NTG staff also designed and implemented a network for these remote offices. The key activities here included network planning and design, equipment purchase, wiring and setup.

Technology and Systems Used

In Malaysia, the technology used was based on the Windows NT/2000 based platform. In Sudan, the project work was done on a Linux based platform.

Accomplishments and Results:

The management of these projects was international in scope and underscored the ability of NTG Clarity to provide qualified and experienced personnel, on short notice, to various parts of the world with a knowledge of the culture, people and special needs of their environment. The projects demonstrated a strong capability of NTG personnel to deal effectively and efficiently with people in a different culture and environment and successfully accomplish their tasks.

The Malaysia site IT management project was successfully completed and the Sudan site IT management project is still in progress.
